

ABDULLAH KAMRAN

FULL STACK DEVELOPER

United Arab Emirates • +971 55 963 8177 • abdullahkamran823@gmail.com • <https://abdullahexe.online> • github.com/4bdulllahh

PROFESSIONAL SUMMARY

Dynamic and performance-driven Full-Stack Developer and Honor's List student proficient across 16 technical framework nodes including React, Python, Java, and Node.js. Transitioned from high-performance sales environments to computer engineering, leveraging a strong self-taught blueprint to deliver completely optimized web, mobile, and game applications. Proven track record handling full-lifecycle deployment pipelines, building custom client tools, and structuring backend environments that eliminate organizational friction.

CORE TECHNICAL SKILLS

Languages & Stacks: JavaScript (ES6+), Python, C++, Java, Kotlin, HTML5, CSS3, JSON

Frameworks & Libraries: React, Next.js, Node.js, Tailwind CSS, WebGL, Three.js, API Integration

Environments & Platforms: Android Studio, Gradle, Unity Engine, Twine, Git, GitHub, Vercel

AI & Backend Systems: Machine Learning Models (RandomForestClassifier), LLM Training, Chatbots, Database Management (MySQL, MongoDB)

Design & Optimization: UI/UX Development, Prototyping (Figma, Canva), SEO Architecture, WordPress, CAD, Core Networking

PROFESSIONAL EXPERIENCE

Full Stack Freelancer

Jan 2023 – Present

Self-Employed | United Arab Emirates

- Oversee end-to-end agile lifecycle developments for diverse business portfolios, orchestrating requirements from initial high-fidelity Figma UI/UX prototyping to actual system production.
- Architect responsive, performance-tuned frontend interfaces utilizing pure client-side vanilla structures and utility-first Tailwind CSS logic to guarantee high scoring page speeds.
- Develop and deploy structured e-commerce databases, managing custom integrations, secure payment wall pathways, and automated product distribution logic independently.
- Coordinate technical milestones with international clients, managing source repositories, iterative release deployments, strict deadlines, and comprehensive system feedback logs.

Sales Manager

Jan 2022 – Present

Uniformers | United Arab Emirates

- Manage end-to-end inbound customer acquisition pipelines, leading technical negotiations, contract configurations, and strategic client retention procedures.
- Independently taught myself HTML, CSS, and JavaScript during business operational downtime to eliminate systemic corporate communication boundaries.
- Architected and launched proprietary, internal cross-collaboration portals and data view web interfaces that dramatically streamlined team tracking capabilities and accelerated pipeline conversion velocities.
- Earned accelerated corporate promotion to executive manager by designing and injecting custom technical tools directly into traditional business operations.

EDUCATION

BathSpa University

Jan 2023 – Jan 2026

Bachelor of Science in Computer Science — Honors List Student

- Evolved from a raw web developer into an expert Full-Stack Engineer, managing complex projects spanning responsive mobile architectures, data analytics, and scalable technical blueprints while maintaining pristine honor list standing.

The English Private School

Jan 2010 – Jan 2022

Degree of Higher Education in General Science

- Acquired foundational data logic metrics while spearheading independent software engineering practices, learning backend database variables, and constructing experimental applications through regular local system tinkering.

CORE PROJECT PRODUCTION

- Brutalist Engine (abdullahexe.online):** Production web hub built with raw styling frameworks. Implements custom client mouse-coordinate tracking logic, runtime animation scroll-observers, and embedded content matrices.

- **Stroke Prediction Architecture:** Executed data cleaning, diagnostic parameter modeling, and statistical classification setups to deploy a machine learning model via a Kaggle notebook using random forest routines.
- **Knights Indie Game:** Independently prototyped and published a functional 2D environmental action script on a rigid one-week lifecycle limit utilizing structural Unity game cycles and standalone C++ object code.
